PRODUCT LANDING PAGE – CERTIFICATION PROJECT

Objective: Build an app that is functionally similar to
https://product-landing-page.freecodecamp.rocks. **Do not copy this demo
project**.

User Stories:

1. Your product landing page should have a header element with a
   corresponding id="header"
2. You can see an image within the header element with a
   corresponding id="header-img" (A logo would make a good image
   here)
3. Within the #header element, you can see a nav element with a
   corresponding id="nav-bar"
4. You can see at least three clickable elements inside the nav
   element, each with the class nav-link
5. When you click a .nav-link button in the nav element, you are
   taken to the corresponding section of the landing page
6. You can watch an embedded product video with id="video"
7. Your landing page has a form element with a corresponding
   id="form"
8. Within the form, there is an input field with id="email" where
   you can enter an email address
9. The #email input field should have placeholder text to let users
   know what the field is for
10. The #email input field uses HTML5 validation to confirm that the
    entered text is an email address
11. Within the form, there is a submit input with a corresponding
    id="submit"

12. When you click the #submit element, the email is submitted to a static page (use this mock URL: https://www.freecodecamp.com/email-submit)

13.   The navbar should always be at the top of the viewport

14.   Your product landing page should have at least one media query

15.   Your product landing page should utilize CSS flexbox at least once

Fulfill the user stories and pass all the tests below to complete this project. Give it your own personal style. Happy Coding!

Note: Be sure to add <link rel="stylesheet" href="styles.css"> in your HTML to link your stylesheet and apply your CSS

TESTS

1. You should have a header element with an id of header.

2. You should have an img element with an id of header-img.

3. Your #header-img should be a descendant of the #header.

4. Your #header-img should have a src attribute.

5. Your #header-img's src value should be a valid URL (starts with http).

6. You should have a nav element with an id of nav-bar.

7.   Your #nav-bar should be a descendant of the #header.

8.   You should have at least 3 .nav-link elements within the #nav-bar.

9. Each .nav-link element should have an href attribute.

10. Each .nav-link element should link to a corresponding element on the landing page (has an href with a value of another element's id. e.g. #footer).

11. You should have a `video` or `iframe` element with an `id` of `video`.

12. Your `#video` should have a `src` attribute.

13. You should have a `form` element with an `id` of `form`.

14. You should have an `input` element with an `id` of `email`.

15. Your `#email` should be a descendant of the `#form`.

16. Your `#email` should have the `placeholder` attribute with placeholder text.

17. Your `#email` should use HTML5 validation by setting its `type` to `email`.

18. You should have an `input` element with an `id` of `submit`.

19. Your `#submit` should be a descendant of the `#form`.

20. Your `#submit` should have a `type` of `submit`.

21. Your `#form` should have an `action` attribute of https://www.freecodecamp.com/email-submit.

22. Your `#email` should have a `name` attribute of `email`.

23. Your `#nav-bar` should always be at the top of the viewport.

24. Your Product Landing Page should use at least one media query.

25. Your Product Landing Page should use CSS Flexbox at least once.
